👤 PROFILE

My goal is always to build products that users fall in love with. Achieving this requires, not only a brilliant UX and design, but also a flawless engineering process capable of delivering excellence at all levels.

Having worked as a full stack engineer and a team manager I'm fully convinced that each and every step taken by all team members count equally as much on the mission to get happy customers and users. That's why I try to push both myself and my teammates to improve ourselves, always using an equal dose of good healthy humour and fun.

I also love exploring new technologies and constantly look for ways to leverage them in the projects that I work on.

📁 EMPLOYMENT HISTORY

Owner at Develop17, Cáceres

December 2016 – Present

I founded the company to challenge myself and customers to push the limits of. The company specializes on web and mobile development using a modern stack based on the technical skills listed on this document.

Senior Frontend Engineer at Conferize, Copenhagen/Remote

June 2017 – Present

At Conferize we've rewritten the frontend of the app from scratch using React and GraphQL as core technologies of the stack. I've been lucky to contribute to the majority of areas of the application and to guide the team in the adoption and learning process of these technologies.

Senior Frontend Developer at Schantz, Copenhagen

March 2015 – June 2017

Frontend engineer for Schantz Life, a Java and GWT based web solution for the pension industry. Working agile, my main responsibilities were maintaining the web framework and crafting parts of the product's frontend and web interfaces. Responsible for navigation, routing and the CSS architecture.

Java Architect at Visma Consulting, Copenhagen

October 2013 – March 2015

Consultant in the Danish Ministry of Agriculture, Fisheries and Food. I worked on the internal adoption of EU driven projects under a domain driven architecture. During this period I worked intensively with Oracle, JavaEE and Apache Camel.

Foodsball

Java Architect and Team Lead at Gloin, Cáceres

February 2011 – October 2013

Team lead and JEE architect in projects within the music industry, for customers all over the world. I was responsible for the design and construction of a musical work search engine, and a distributed data quality system implemented in Java EE.

Software Engineer at Indra, Madrid

June 2007 – February 2011

As part of a 20 000+ employees IT company, I worked as a developer and analyst in departments such as innovation, air traffic control and railway systems. Most projects were web based and developed with Java EE.

EDUCATION

University of Extremadura, Cáceres

September 2002 – February 2008

Degree: Masters' Degree in Computer Science

I graduated with honours with a GPA of 3.5 on a 4 scale.

University of Extremadura, Cáceres

June 2011 – June 2012

Degree: Postgraduate in Software Engineering

Focused my research on software engineering for cloud (IaaS and PaaS) and pervasive computing through mobile devices. I published numerous papers in highly ranked conferences and journals.

Extremadura Business School, Cáceres

September 2012 – April 2013

Degree: Executive Management Program

Sixty hour practical program on executive management skills, taught by excellent coaches such as Mario Alonso Puig.

EXTRA-CURRICULAR ACTIVITIES

Conference Organiser at Extremadura Digital Day, Cáceres

October 2018 – Present

Together with a few colleagues from Cáceres, in 2018 we launched the first digital conference of our region that gathered developers, makers and business managers. We managed to have 300 attendees on the 1st edition and plan to launch it each year.

Speaker

December 2016 – Present

I enjoy giving tech talks. It's something I've done internally at the companies I've worked for and also publicly at some local meet-ups. I feel that conferences are a great place to learn and to share so I'm always in the lookout for places that will put up with me for a talk.
